

Hatem Chehade

Computer Science · University of Calgary · Calgary, AB

hatem.chehade@ucalgary.ca · hatemchehade.vercel.app · linkedin.com/in/hatem-chehade · github.com/HatemCodes

Fourth-year Computer Science student and Enbridge REWS co-op, working across both sides: security- and privacy-focused development, plus project coordination, governance, and reporting inside a large enterprise. Three years of team leadership, staff training, and coaching alongside it.

EDUCATION

BSc Computer Science — University of Calgary, Faculty of Science

Expected 2027 · GPA 3.5

Extending the final year to accommodate a co-op or internship term.

Relevant coursework: Information Security & Privacy (A+), Network Systems Security, Thinking with Data (A), Professional Technical Communication (A), Information Technology Ethics (A), Intro to Software Engineering (A-), Data Structures & Algorithm Analysis, Web-Based Systems, Principles of Operating Systems, Theoretical Foundations of CS I & II, Linear Methods (A+).

PROJECTS

Veritable — AI Propaganda Detection

Oct – Nov 2025

Python · NLP · Web prototype

- Built a four-layer analysis pipeline that scores text for manipulation technique — loaded framing, false dilemmas, appeals to fear, manufactured consensus — rather than classifying it true or false.
- Composed per-technique scores into a single rating behind a web-based prototype; carried the project past the course deadline into a working tool. github.com/HatemCodes/veritable-ai-propaganda-detector

SecurePass — Encrypted Password Vault

Python · Flask · React · RSA · SHA-256

- Implemented RSA encryption and SHA-256 hashing from the primitives rather than calling a library, to work through key handling and credential-storage failure modes directly.
- Built the full stack end to end: cryptography layer, Flask REST API, and React front end.

Sanctum — Privacy-First Coaching Marketplace

In validation

Product research · Planned: React (Vite), Flask, REST

- Designing a two-sided marketplace with modesty and privacy as first-class matching axes: same-gender matching by default, photo-gated profiles, text-first coaching, no public progress feed. Running beginner interviews, coach interviews, and a Calgary supply census before writing code.

EXPERIENCE

REWS Advisor, Co-op Student — Enbridge

Sep – Dec 2026 · Calgary, AB

- Support governance, project coordination, data management, and operational planning across Real Estate & Workplace Services; maintain long-term work plans and track scheduling, budget, and progress, including health checks on construction and renovation projects.
- Build KPI inputs, dashboards, and monthly reporting packages, and produce the documentation behind them — playbooks, RACI drafts, SharePoint pages, and how-to guides for recurring activities.

Pharmacy Assistant — Shoppers Drug Mart

Jun 2023 – Present · Calgary, AB

- Process prescriptions, manage insurance claims, and maintain digital patient records in pharmacy management software under legal privacy obligations where accuracy is non-negotiable.
- Trained new staff on systems and procedures; three-plus years with one employer while a full-time student.

Founder & Fitness Coach — HatemFit (self-employed)

Ongoing · Calgary, AB

- Run an independent online coaching practice: custom nutrition plans and training programming for 10+ clients, delivered remotely with a structured check-in cycle.
- Several clients have since trained independently — the intended outcome.

Sales Leader — ICM Inner Circle Marketing

Apr – Sep 2024 · Calgary, AB

- Generated 400+ verified donations through direct door-to-door outreach; promoted into leadership within two months.
- Trained and co-managed a 25-person team, onboarding new members and holding the group to targets.

Technical Operations & Digital Systems Assistant — Xperts Auto Sales

Dec 2024 – Aug 2025 · Calgary, AB

- Coordinated shop operations alongside the company's digital presence, combining hands-on automotive support with technical and online-facing work.

TECHNICAL SKILLS

LANGUAGES	Python, Java, JavaScript, C, C++, SQL, Assembly
FRONTEND	React (Vite), HTML/CSS
BACKEND	Flask, REST/CORS APIs, JSON persistence
SECURITY	RSA encryption, SHA-256 hashing, credential storage design
TOOLING	Git & branching workflows, Unix/Linux shell scripting
OPS	Excel, MS Office Suite, project tracking & scheduling, KPI reporting, process documentation, RACI, SharePoint
